My Praying Mantis Life Cycle Book

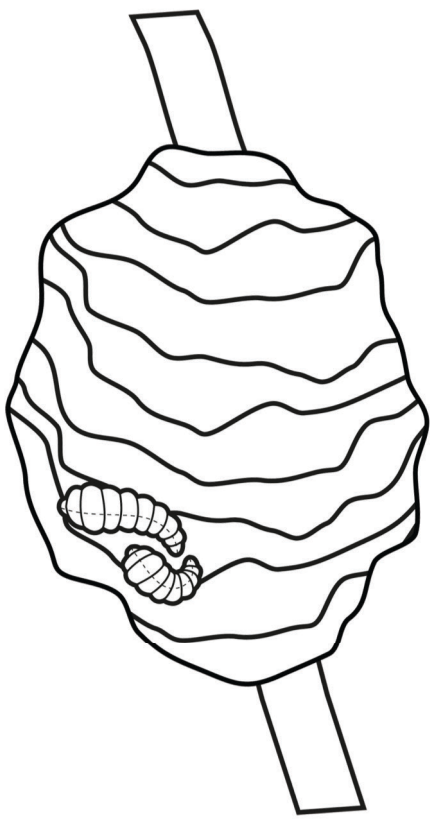

© Fun With Mama

Cut out all the rectangle squares and staple together to make a book.

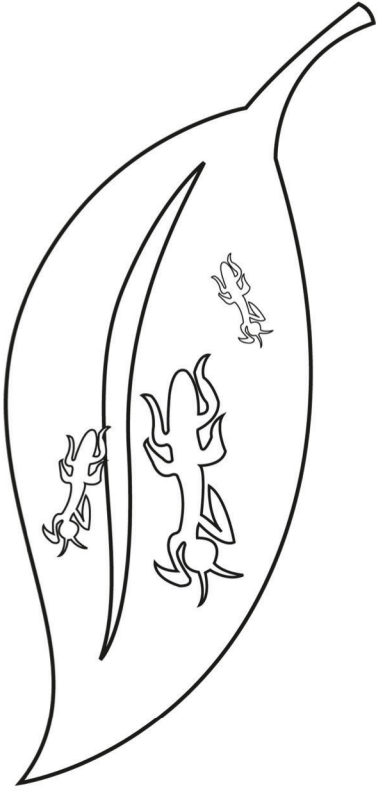

Read the book and color the pictures.

The soft egg case.

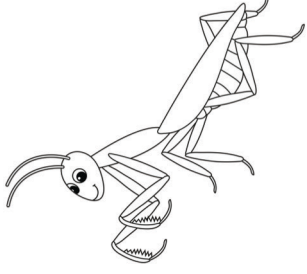

The hardened egg.

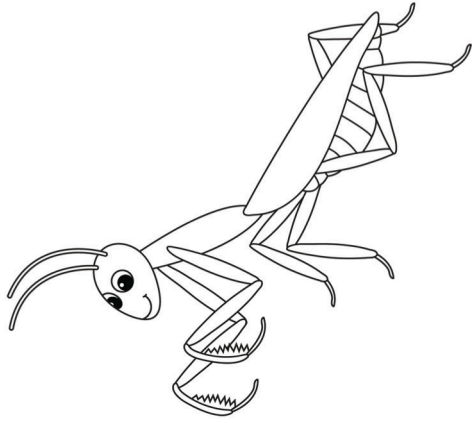

The nymphs are born.

© Fun With Mama

The adolescent praying mantis.

An adult praying mantis.

Information Cards

In fall, the mother praying mantis lays her eggs on a plant stem or twig in a case known as an ootheca.

She makes a protective cover, egg case, for them.

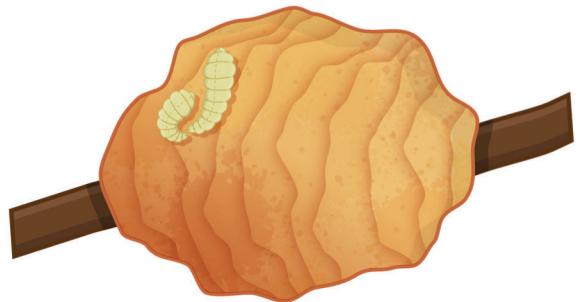

This case starts out foamy. Soon after laying the eggs, the female dies.

© Fun with Mama

soft egg case

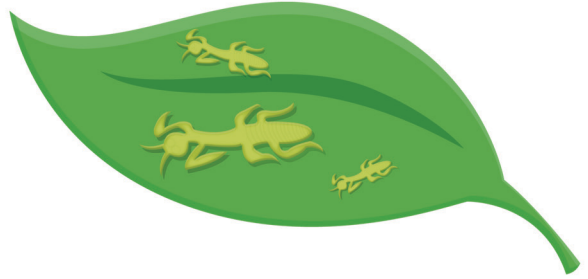

The case turns brown and hardens to protect the eggs. Up to 400 eggs will spend the winter inside the case.

hardened egg

Information Cards

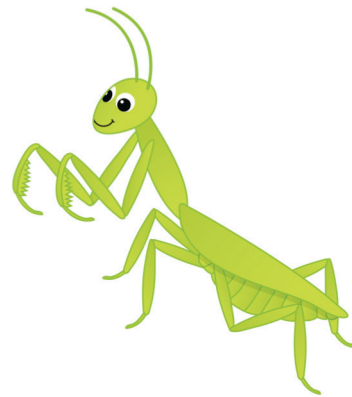

As the weather warms, the tiny praying mantises, known as nymphs, burst out of the egg case. The nymphs do not have wings yet. They eat any insects like crickets and flies. They will even eat each other if there is no other food.

© Fun with Mama

nymphs

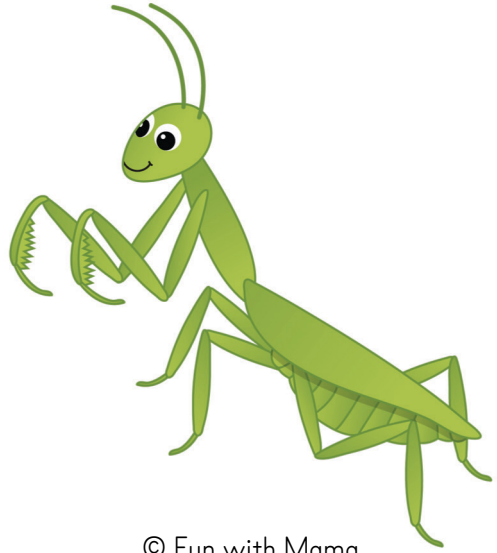

As the praying mantis grows, they shed their outer shell known as an exoskeleton. They will shed their skin many times as they grow. Their wings also start to grow.

adolescent

Information Cards

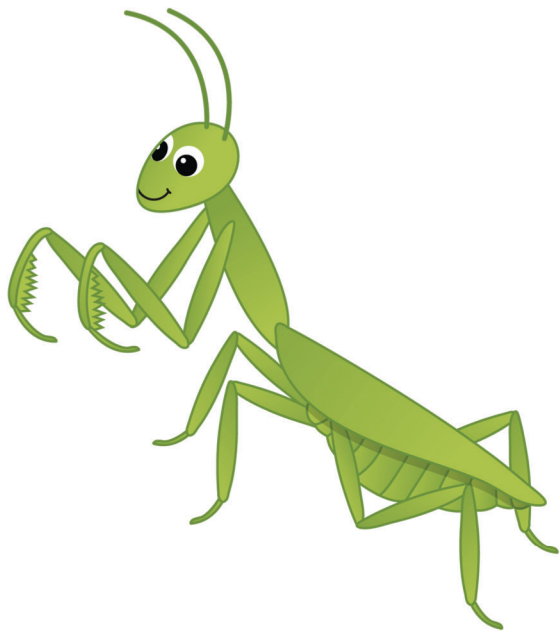

The praying mantis is the only insect that is able to turn from side to side in a 180° angle. They have powerful jaws and eat flies, crickets, grasshoppers. Once the male and female mate, the female may bite the head off the male or even eat him all up.
